

# Design Services

Realize the business value of your technology investments

We enable you to understand the current state and capabilities of the infrastructure being deployed, and develop implementation and migration plans to make sure it's expertly installed, configured, deployed and integrated to deliver the outcomes you need.

**Our industry-certified design professionals translate complex technology roadmaps into technology solutions, with technical designs and implementation plans that accelerate technology deployment and time to value.**

As the technology industry transitions from pure hardware-delivered technology solutions to software defined architectures, our qualified multivendor experts will assist you to implement best-of-breed solutions, leverage the full capabilities of your infrastructure and unlock incremental software features in a planned manner, as your business requires.

**A successful technology design delivers the outcomes you need.**

We connect you with multivendor and domain specialists who have the credentials and experience to advise on the technology features and adoption opportunities of your technology investments.

Our Design Services enable you to understand the current state and future capabilities of the infrastructure to be deployed, and leverage our expertise to develop implementation and migration plans that will support your business planning cycles.

For leading-edge technologies, or when the technical solution requires environmental or technical validation, our experts can build and configure a lab or proof-of-concept environment so that you can understand the capabilities of the solution before having to commit to the full solution.

**From expert guidance to seamless integration, we are your technology transformation partner, delivering end-to-end technology services from edge to cloud.**

In addition to our world-class project and program management capabilities, we have extensive experience in delivering technology solutions at scale, in multiple industries and across geographies. We know how to avoid common technology adoption and automation pitfalls – and execute a successful technology design that delivers the outcomes you need.

A seamless handover to deployment specialists to implement the technology solution and integrate it into your environment, with considerations to support and management teams.

“ Our Design Services maximize your **technology investments** by connecting you with **industry-certified professionals**, offering expert guidance and **providing seamless support** for **successful technology design and deployment**.

## Business outcomes and benefits

### Reduced risk and accelerated time to value for technology investments

Use our experience in design to reduce risk and decrease the time it takes to realize the value of your technology.

### Comprehensive multivendor designs based on global expertise and best practice

Designs based on proven technology reference architectures and use-cases, leveraging industry-leading development models and methodologies.

### Seamless integration and operational handover

As part of the implementation, we ensure that the operational support teams (NTT DATA or your internal teams) are fully enabled to support the solution.

### Global consistency in design architecture

Design blueprints such as high- and low-level designs promote successful, quality deployments, executed rapidly, with the ability for clients to scale anywhere in the world.

### Offload technology design and planning onboarding tasks from in-house staff

Minimize disruption to your day-to-day operations by offloading design and planning tasks to skilled resources.

---

## Key features

### Access to global expertise

You'll be working with highly skilled resources who have implemented your solution in complex environments in a wide variety of industries. With design professionals in every region, we can ensure local relevance and global consistency. With access to a global workforce, we ensure you have the best resources available for your project.

### Best-practice designs

Designs based on proven technology reference architectures and use-cases, leveraging industry-leading development models and methodologies.

### Multivendor architectural approach

We have expertise, skills and certifications across a broad array of hardware and software vendors.

## Why NTT DATA

### Global Coverage

3,000 architecture, technology design, and delivery professionals worldwide.

### Proven methodology

Standardized global methodology based on more than 30 years of experience.

### Specialized expertise

More than 1,200 technical and design service consultants and engineers with a combined total of over 11,000 certifications.

### Your service, your way

Choose one or several implementation options, or use our end-to-end implementation service, from staging through to knowledge transfer.

### Top-tier, multivendor support

Strategic partnerships with top-tier original equipment manufacturers (OEMs) providers, as well as skills and certifications across all leading hardware and software vendors.
