

Cloud-native modernization and migration for Microsoft Azure

Transform business processes and app development with agility, speed up time to market and build a competitive advantage

From discovery to delivery, cloud-native makes all the difference

Wherever you are on your cloud transformation journey, cloud-native computing plays a significant role in creating business value.

Transform your business

Think cloud-native. Your business will transform when you transform your thinking about cloud.

The upside to a business transformed with cloud-native? Faster development, more time to drive innovation, and agile practices to speed up customer response times.

Follow a proven cloud journey framework

From discovery to delivery, NTT DATA will help you each step of the way. We use proven blueprints, accelerators, and frameworks aligned to your business and industry-specific needs.

Migrate to the future with confidence

Modernization typically leads to a migration strategy to ensure all workloads are on the right clouds, at the right time, with the right architecture.

The right strategy often leverages Azure for platform-as-a-service, low-code applications and databases to speed delivery, boost developer productivity, reduce complexity and lower the total cost of ownership.

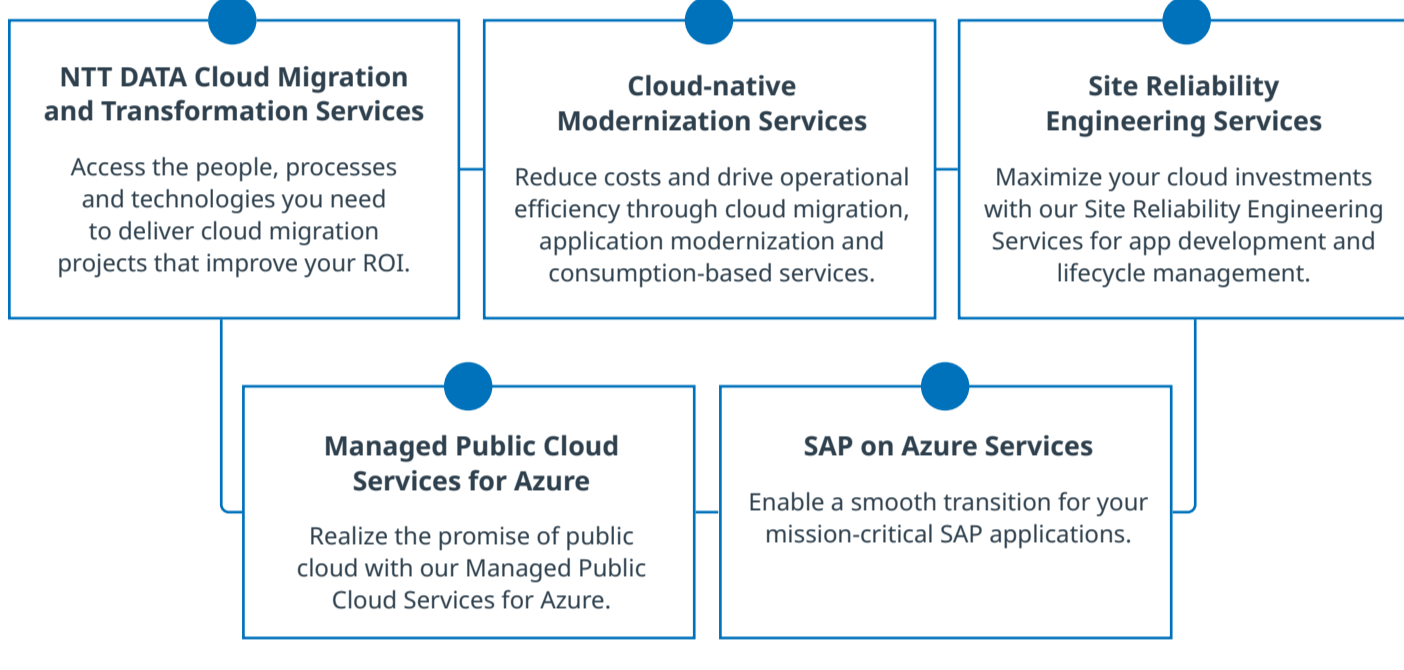

Optimize continuously

For long-term success, organizations must set up tools and technologies for ongoing monitoring of cloud environments to keep them secure and high performing at all times.

Deliver AI-enabled data insights and safeguard your clouds, networks and applications with confidence.

Cloud-native Modernization and Migration Services with Azure

Cloud-native done right: speed, quality and innovation

Why Microsoft Azure

- Deep experience built through 25 years of partnering with Microsoft
- Azure Expert Managed Services Provider
- Highest Microsoft certifications and numerous Microsoft specializations
- Over 2,300 certified Azure professionals with 4,000 Azure-specific certifications

- With a comprehensive suite of tools and services for application modernization, Azure enables businesses to refactor, rearchitect, or rebuild applications.
- The integration of Azure DevOps streamlines development, testing, and deployment processes, which supports a modern DevOps culture within organizations.
- Azure provides strong security and compliance throughout the application lifecycle, enabling organizations to confidently migrate sensitive workloads to the cloud while meeting regulatory requirements.

Why NTT DATA for Microsoft Azure

We've got you covered with Microsoft accreditations for modernization and migration

NTT DATA and Microsoft Azure

Delivering better business results

Apply proven frameworks

Our experts leverage blueprints, accelerators and microservices to help you define, manage and expedite projects.

Align to the business

First, we work with you to understand which business outcomes you want to achieve. Then, we come up with a strategy to transform your clouds to help you reach those outcomes.

Transform your business

Discover how best to drive savings, improve customer engagement and boost productivity to create efficiencies across the business.

Lower total cost of ownership

Identify opportunities to save on operational overheads, optimize the use of resources and reinvest in innovation.

Improve risk posture

Legacy applications are costly to maintain, scale, secure and operate. Our services keep your data safe and help you meet regulatory requirements for data protection.

Drive SAP on Microsoft Azure success

Leverage our advanced specialization to successfully implement SAP solutions.

Azure, modernization and migration done right

Experience the speed, agility and cost benefits of Microsoft Azure while maintaining control and visibility. Accelerate your business transformation.
