## 1 Overview

Technical Account Management (TAM) is a security management function of NTT Ltd. Global Services that provides technical and risk based oversight for a Managed Security Services (MSS) Client.

Technical Account Managers are named individuals charged with ensuring the services are aligned to focus on the technical security requirements of the Client.

TAM delivers reliable security management support, guidance and governance to the Client to:

- Ensure relevance of the technical security solutions to the Client.
- Represent Client security management requirements to NTT Ltd. and ensure NTT Ltd. services are understood by the Client.
- Ensure timely management of technical and security escalation both to and from the Client.
- Engage and manage Client focused Continual Service Improvement initiatives for security services.
- Provide security status governance and guidance for the Client relative to the Client security posture, risk management strategy and security services delivered by NTT Ltd..

To achieve these objectives, it is vital that NTT Ltd. implements effective security management and governance that underpins all NTT Ltd. activities, ensuring:

- Alignment of the services against Client requirements is met at a security and technical level.
- That impact of change and implications of issues is understood within the operations teams and within the Client teams.
- Any changes to the security service are planned, risk-assessed, managed, and communicated to the appropriate parties.
- That the evolving risk landscape is communicated and mapped against NTT Ltd. services delivered to the Client using industry accepted frameworks.
- Focus is always on Client security posture and risk.

Service delivery functions **not** included in this document include:

- Client Service Management - Standard
- Client Service Management - Enhanced

## 2 Business Benefits

### 2.1 A security partnership

The TAM is committed to developing a long-term relationship with a deep understanding of the Client’s business and risks. The TAM is able to explain how MSS detections work, provide supporting data and assist during an incident. The TAM will as such become a natural extension of the Client’s security team with the Client benefiting from strong internal and external stakeholder management at a senior level.

### 2.2 Business intelligence

The TAM works as part of the Client team to understand the Client organization, bringing a depth of knowledge and ensuring the evolving needs of the Client’s business are met, and that the value of the services provided is maximized.

### 2.3 Governance and Compliance

The TAM shall assist organizations to fulfil governance and compliance through an ongoing engagement and implementation of security activity reporting practices.

### 2.4 Continuous Improvement

TAM Clients benefit from regular review meetings, a key component of which is identifying areas where the service can be improved, e.g. to continuously align with the Clients changing environment. These are then tracked to conclusion by the TAM, reducing the risk of potential security issues and ensuring the service as a whole runs smoothly.

## 3 Technical Account Management

The Technical Account Management service is a Security Management function supporting Managed Security Services (MSS) Clients and is delivered by a designated resource. The TAM is a subject matter expert in cyber security with a strong operational focus to ensure value realization of the managed services.

The role of TAM is typically recommended when the complexity and diversity of the Client environment creates unique challenges for operations staff – from planning, analytics, best practices, risk mitigation techniques or trusted advisor and advocate.

The TAM supports Clients as part of a long-term relationship. This enables the TAM to develop a deep understanding of the Client’s business objectives, which include strategic initiatives, risk profiles by industry or sector and maturity. This knowledge and level of technical engagement ensures Clients benefit from an optimized service attuned to the organizations business imperatives.

The TAM is also the escalation point for security incidents whereby intimate knowledge and proximity to the Client provides further context to aid in diagnosis and remedial activities.

TAM business value to a Client account:

|                                                                                                               |                                      |

| Security Management | <p>Maintain relevance of the services in relation to the Client's business.</p> <p>Maintain control of on-going security actions and issues ensuring timely resolution.</p> <p>Present relevant security updates during operational meetings.</p> <p>Represent the Client towards internal NTT Ltd. stakeholders and other partners.</p> <p>Management of complex escalations relating to the Service.</p> <p>Working from a combination of the SOC and Client site (If regionally available).</p> <p>Respond to critical Client security incidents and support requests (where security service quality/Client satisfaction is affected).</p> <p>Oversee the Change Management functions ensuring actions taken by the SOC are aligned with Client Change Management policies and changes are reviewed for risk.</p> |

### 3.1.1 Deliverable Summary

| Service Deliverables             | TAM                                                                                        |
|----------------------------------|--------------------------------------------------------------------------------------------|
| Delivery Model                   | On-site and remote                                                                         |
| Monthly Service Review Meeting   | Client preference / scope                                                                  |
| Monthly Security Report          | Curated report, technical in nature. Includes baseline review, changes and recommendations |
| Quarterly Service Review Meeting | In attendance (subject to CSM-E subscription)                                              |
| Weekly Meeting                   | Telephone or in person (proximity)                                                         |

### 3.1.2 Monthly Security Report

The TAM monthly report is technical in nature and includes the following information:

- Executive overview of overall Security posture.
- Service Management Summary (incidents and changes).
- Assessment based on detailed analysis conducted on anomalies detected during the reporting period.
- Risks and mitigations that may be considered by the Client (based on industry experiences).
- Gaps and prioritized recommendations for improvement.

## 4 Terminologies and Definitions

Terminologies and Definitions for Managed Security Services are presented in the 'NTT Ltd. - Terminology and Shared Services Reference' document that accompanies this Service Description.

## 5 Operational Level Agreement

Operating Level Agreements (OLAs) for Managed Security Services are presented in the 'Operating Level Agreements – Managed Security Services' document that accompanies this Service Description.

## 6 Changes in Service

### 6.1 Regulatory Change Requirements

If regulatory changes (e.g., changes by a regulatory agency, legislative body, or court of competent jurisdiction) require NTT Ltd. to modify the Services described herein, NTT Ltd. will modify the Services and this Service Description accordingly without diminishing the features, functionality or performance. In the event a modification in response to regulatory changes results in a diminishment of features, functionality or performance, Client agrees in good faith to work with NTT Ltd. to amend this Service Description accordingly and execute any additional agreement which may be reasonable requested by NTT Ltd. to document such amendment.

### 6.2 Method of Service Delivery

NTT Ltd. reserves the right to make changes to the service, provided these changes do not have a material adverse impact on functionality or performance.

## 7 Controlling Terms

In the event of any conflict between the terms of this Service Description and the terms of the Client agreements, the terms of this Service Description shall control.

**Together we do great things**
